

# EXCERCISE GPARTED

## (EXPLANATION HOW DO THE PARTITIONS ARE MADE)

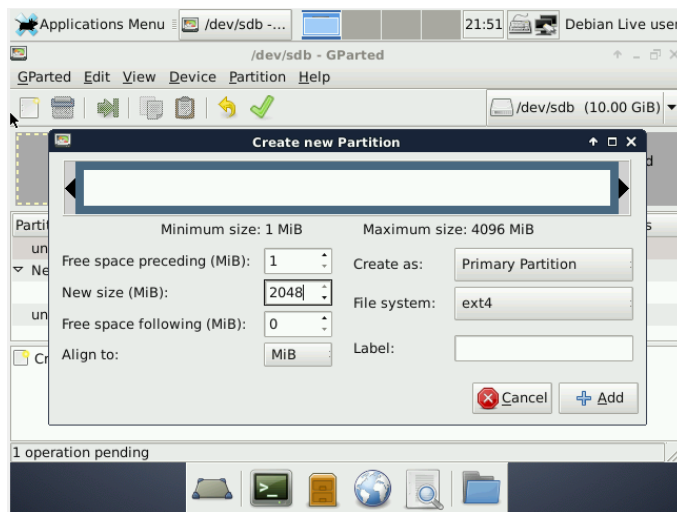

We start by selecting the 10 gb that we create and creating the partition table:

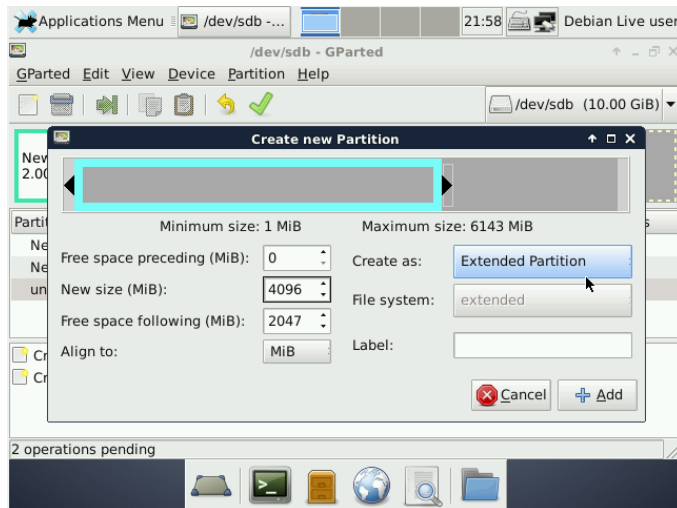

We continue with A NTFS primary partition of 2GB called PNTFS:

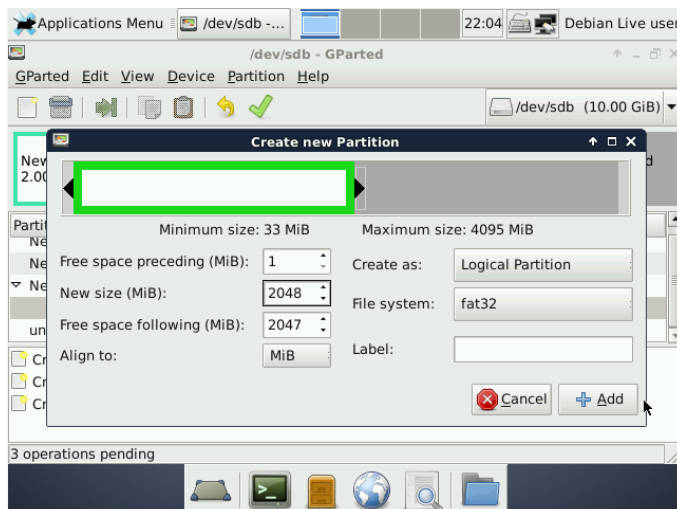

The second partition will be made with the EXT4 file system and equal to 2GB:

This partition will be extended but the 4GB:

Inside the extended partition we will make a logical partition:

We ended up opening Windows 7, opening the create and format hard drive partitions and we opened the partitions to verify the partitions we made.
